

Lewis Building Technology

Smarter Buildings

Exceeding your expectations with IT expertise

take control

Clever systems for better environments

Lewis Building Technology gives you complete automation of your home and business – accessible from anywhere. Intelligently designed, expertly programmed, professionally installed and elegantly concealed, our solutions will enhance your lifestyle and workplace, and exceed your expectations.

Our highly experienced in-house design experts create bespoke solutions to automate, synchronise and manage the systems and devices that feature throughout your property. Simple, intuitive consoles give you integrated, fingertip control of audio-visual equipment, climate control and lighting, computer networks and security systems.

From full project management to collaboration with your own designers and architects, we'll scale the project in whatever way you'd like us to. You'll have a dedicated consultant who'll work with you meticulously to cover every detail and offer unbiased,

knowledge-rich advice throughout the project from the initial brief to implementation, training and handover.

Afterwards, we'll continue to monitor all technologies, cabling and devices, advise on the latest upgrades, and offer an annual health check.

Our smart building automation is already implemented in homes, classrooms, operation and command centres, hotels, entertainment venues and broadcast facilities across the UK. We only work with the industry's leading technologies and our solutions and experts have won numerous awards for quality and customer service.

So whether you're looking at a new build, a renovation or a retro-fit, call us now to see how we can help you realise your dream.

mood enhancement

The perfect environment

Whether you're luxuriating in your spa or working out in your gym, closing business in your office or chilling out with your family, you want to create the perfect environment at the touch of a button.

Integrated heating, lighting, air-conditioning, ventilation and blinds enable you to embrace mood-defining effects, and define precisely the right ambience for every unique area of your home or business.

Infinitely flexible pre-programmed settings based on time-of-day or room usage not only enhance your enjoyment of your property but can also help to improve energy efficiency.

From pampering to practicality, from romance to resource use, we help you manage every aspect of your environment – perfectly.

climate control · entertainment lighting · automated window dressings · simulated occupancy
energy efficiency

intelligent integration

All-round business efficiency

From hot desks to chill-out zones, from video brainstorming to water-cooler catch-ups, from the warehouse to the boardroom – the technology that supports an aspirational lifestyle can also give you a truly 21st century business.

When your offices and factories fill up with resource-hungry people, you can use spectacularly imaginative, environmentally-savvy ways to give access only to specific areas and systems. As employees swipe their access cards or key in their pins, your building intelligently comes to life. Office areas light up one-by-one, air-conditioning and heating systems react, and security settings adjust.

Intelligent integration allows you to create an enviably modern and supportive working environment but still succeed in reducing costs and energy use. And as you close down your computer and key yourself out, the lights and heating shut down and network resources go to sleep.

environmentally-friendly · cost-aware

stylish synchronicity

Command-and-control communication

Imagine... you drive up to your property, the gates open, the blinds in your living room descend, the lights and heating in your pool come on, a movie cues in your home cinema, your CCTV upgrades its settings, your lawn sprinkler programme checks tomorrow's weather forecast and adjusts its schedule. And that's just the start.

Like the most discreet valet, our smart programming will fulfil every requirement. A fault-free wireless network covers your whole property, while a robust data network integrates every technology and device. From a single VoIP-enabled touch panel you have

powerful, intuitive control, can program and refine settings, and make and receive calls. And when you're away from home or the office, you can achieve the same control via your mobile phone or the internet.

Your life is driven by technology. Our intelligent programming and unobtrusive design lets you simplify it and revel in its potential.

sound entertainment

Audio-visual heaven

Let loose the diva in your kitchen and the rock god in your living room, play house in your garage and garage in your house, curl up with Brangelina in your bedroom or die hard with Bruce in your den. It's all under your control.

From one simple device, you can banish DVD and CD clutter and access your entire movie and music collection through the power of distributed audio-visual entertainment. Multi-room systems enable you to transport yourself to Hollywood or Bollywood in high-definition and play your favourite audio tracks, wherever and whenever you want to.

And whatever you choose to watch or listen to, with just one button you can zone in to your favourite entertainment.

Of course, intelligent audio-visual design isn't just for your home. Commercial applications include resource management for meeting rooms and lecture theatres, professional multi-media suites, and helping to get your message out there with digital signage.

total peace of mind

Security in the palm of your hand

Whether you're relaxing at home, working in the **office**, or enjoying the beach or slopes with friends, your property stays safe as houses.

When the doorbell rings, a burglar alarm is activated, or perimeter security is compromised, you'll know. CCTV can be automatically relayed to your TV screen, computer monitor, touch panel or mobile phone, so you can see who's calling.

If you're out, you can make sure your children have arrived home safely by checking their access codes have been used, or let the pool-cleaner in remotely. And in a single-button press you can activate your

property's "vacation setting" so at pre-defined times lights turn on, window dressing close and music plays to create the illusion that someone's home.

Every part of your home or business can be integrated into your security system to provide complete protection and peace of mind, day and night.
